

CONNECTING THE VANTAGE LITE TO AN EXTERNAL COMPUTER QUICK REFERENCE GUIDE

There are two options for connecting the VTL to an external Computer or Printer: **USB Cable** or a **PRC's Bluetooth Adapter**

CONNECTING THE VANTAGE LITE TO A COMPUTER VIA THE USB CABLE

You have to use the **USB cable** that came with your device to connect your **VTL** to an **IBM OR Macintosh** computer.

1. Turn **ON** your **computer** and **VTL**.
2. Connect mini-end of the **USB** cable to the mini **USB** port on the right side of the VTL.
3. Connect the other end to the **USB** port on your computer.
4. Go to **Toolbox** and select **Output Menu**.
5. Set Output to **ON**.
6. Set Output Method to **USB**.
7. Set Output Mode to **Immediate**.
8. Leave Character Pacing **Off**.
9. Set the Keyboard Layout to **UK**.
10. Set Host Computer Type to either **IBM** or **MAC**. (Depending on what you are using)
11. Select **OK** to exit the Menu.
12. On your **PC/MAC**, open a word document or an application you can type into.
13. Now start typing using your overlay. You should be able to see the information appear on your computer screen.

To check at any time whether **Output** is **ON** or **OFF**, look at the status **Display Area** on your device.

CONNECTING THE VANTAGE LITE TO A COMPUTER VIA THE BLUETOOTH TO THE PC

The Bluetooth adaptor has a wide range. Your communication aid and the adaptor do not have to "see" each other like infrared devices do. You can be across the room from the computer in any direction and the connection will still be made.

This Bluetooth adapter allows you to navigate your computer screen using your communication device. You can use the keyboard as a mouse & access certain programs within the PC.

Important: Before you plug the adapter into your computer; Notice that the wireless adapter has a **PRC** Label on one side and a label with the **Icon** of a small switch on the other. The switch label covers a small button which is called the "**Pair Button**". Remember you will have to press this during the set-up process, so depending on where the USB ports are, you will have to access the pair button on the adapter.

1. Insert your **Bluetooth Adapter** into the **USB** port. The **LED** on the adapter may flash for a moment when you plug it in.
2. Go to **Toolbox** and select **Output Menu**.
3. Set Output to **ON**.
4. Set Output Method to **Bluetooth**.
5. Set Output Mode to **Immediate**.
6. Leave Character Pacing **Off**.
7. Set the Keyboard Layout to **UK**.

8. Set Host Computer Type to either **IBM** or **MAC**. (Depending on what you are using).
9. Select the **Pair with BT Adapter** button.
10. A yellow box will appear on the screen advising to, "**Press the pair button on the adapter.**" Press the **circular switch icon** on the adapter.
11. The **LED** on the adapter will flash blue. When the light changes to a solid blue, this indicates the adapter has paired with the device. **** It can take up to 20-30 seconds to pair.****
12. Once paired, the Bluetooth Status box (in the right hand corner of the Menu) will state, "**Paired & Connected**".
13. Select **OK** to exit the Menu.
14. Select **Go To Home/Core**.
15. On your **PC/MAC**, open a word document or an application you can type into.
16. Now start typing using your overlay. You should be able to see the information appear on your computer screen.

****Important Note:** Once your adapter has been paired with your computer, it will always pair even if you remove it from your **PC** & then reconnect it at a later time. The **LED** should turn blue and it should be ready to go as long as you have your settings set correctly in the **Output Menu**.**
