

VTL USING THE MP3 PLAYER

Set-Up Key

The set-up key is the #2 key on the outer case of the device and is used for making quick modifications to a key.

Emulation Software (PASS)

This can be downloaded from the Liberator website and allows you to program your device on a PC; it is a virtual device on your PC.

F9 is the Toolbox and F7 is the Modify Button on the Emulation Software

USING THE IN-BUILT MP3 PLAYER

If you have **MP3**, **WAV**, and **WMA** sound files stored on a USB stick or a Secure Digital card, you can play them on the VTL. You are still able to speak with your device whilst an MP3 is playing – the MP3 is interrupted for the duration.

ACCESSING THE MP3 PLAYER VIA THE ACTIVITY ROW

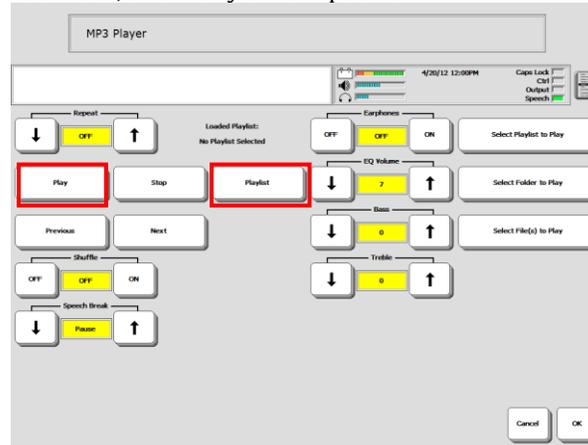

Most of the UNITY vocabulary programs have an MP3 Player icon on the Activity Row that gives you access to the MP3 Player. The MP3 Player activity allows you to play, stop/pause and alter the volume of your MP3s.

ACCESSING THE MP3 PLAYER VIA THE MP3 PLAYER MENU

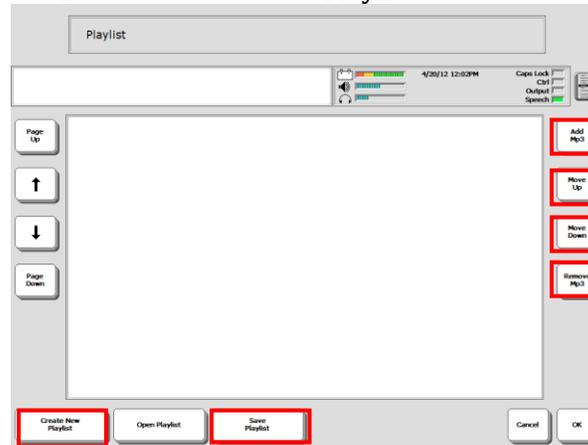

The **MP3 PLAYER MENU** is accessed either via the Toolbox or from the link on the MP3 Player activity and offers you more options for using the player.

You can simply play all the songs on your USB stick or SD card; skip and repeat songs; alter the sound; create playlists; turn on earphones if you wish to use these; and many other options.

CREATING A PLAYLIST

1. Select **Playlist** from the **MP3 Player** menu
2. Select **Create New Playlist**

3. Select **Add MP3** button
4. Select all the songs you want to have on your playlist - when you select the songs, a check mark appears in the upper right corner of the key.

NOTE: You may need to select **Up Directory** to find the songs. An example would be if your songs are on an **SD Card** and you are currently seeing the contents of your **USB Stick**, you will need to select **UP Directory** in order to view your **SD CARD**.

5. Select **OK**.
6. Your playlist will now show the song titles you selected. You can change the order of the songs on your playlist by selecting the **Move Up** or **Move Down** buttons.
7. Select **Save Playlist** and choose the location where you wish to save the playlist such as on the USB stick or SD Card.
8. Type in the name of your playlist. Select **OK** when finished.
9. Your new playlist is now created.

ADDING A PLAYLIST TO AN ICON SEQUENCE

Once your songs are copied and stored onto your USB stick or SD Card and a playlist is created in the MP3 menu, you can now link this playlist to an icon instead of having to go to the MP3 Player menu every time you want to play your songs.

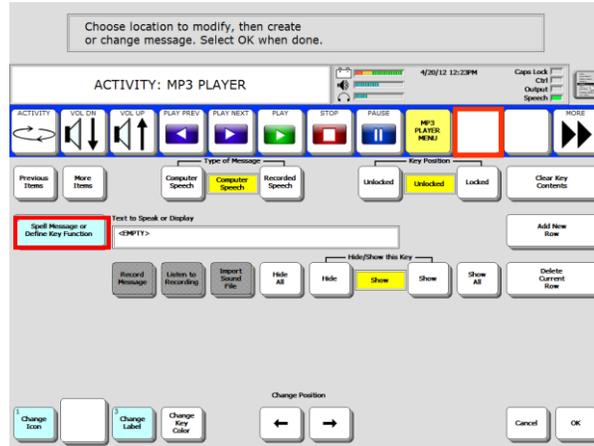

This example links a Playlist to the MP3 activity.

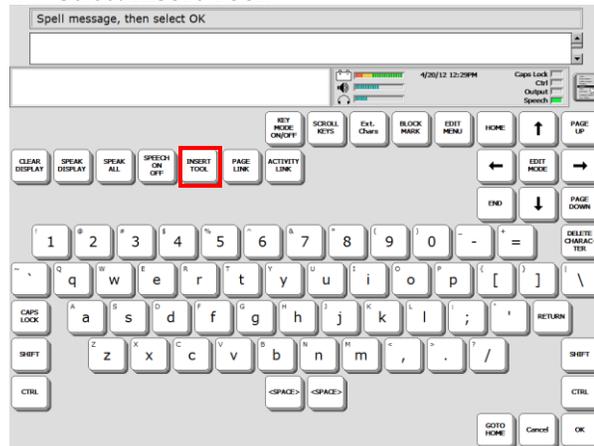

1. With the MP3 activity open on your VTL screen and an empty key available, select **Set-Up key** (#2) on the top of your VTL case.
2. Select the key you want to program your Playlist link under in the MP3 activity.

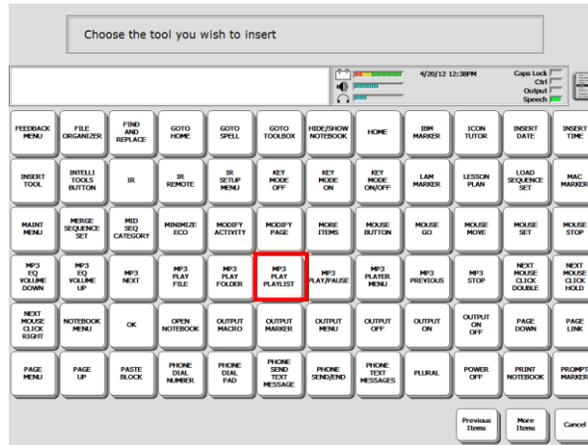

3. Select **Spell Message or Define Key Function.**

4. Select **Insert Tool.**

6. Choose the Tool called **MP3 PLAY PLAYLIST.** (The list is alphabetical and you will need to select more items).

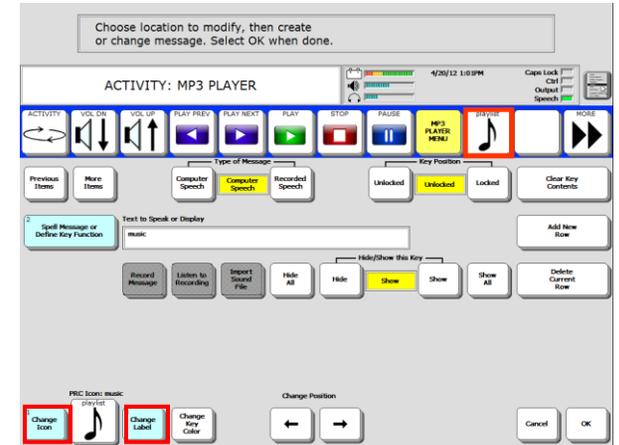

7. Select the playlist you want to play.
NOTE: You may need to select **Up Directory** to find the songs. An example would be if your songs are on an **SD Card** and you are currently seeing the contents of your **USB Stick**, you will need to select **UP Directory** in order to view your **SD CARD**.

8. Now you will see the line in the text area containing the link to your playlist. Select **OK.**

9. **Change your Icon and Label** to reflect the playlist you are playing.

10. Select **OK** when finished and try it out.
